

## **October, 2017 - Advisories for Oil Palm Cultivation**

- ❖ Form one meter radius basin around oil palm immediately after planting and provide sufficient irrigation. Prepare irrigation channels connecting to sub channels to individual palm basin from main channel.
- ❖ In oil palm for effective water utilisation Prepare irrigation channels connecting to sub channels to individual palm basin. And don't allow irrigated water to run in palm plant rows.
- ❖ Drain the excess rain water from the oilpalm plantations by providing trenches (one feet width and two feet depth) across 3-4 palm rows.
- ❖ In oil palm cultivation apply fertilizers at every 3 months intervals under irrigated conditions. (4 times/year).
